

The Weekly Check-In System

Texts go out, mentees report, the dashboard scores it — automatically, every week. Here is the machine and the three things you ever have to do.

The weekly rhythm — fully automatic

MON 9:00 AM	Every active mentee is texted the check-in form link (covers last week, takes ~2 min).
TUE 10:00 AM	Last-call goes only to reps who haven't submitted — firmer at 2 weeks; at 3+ weeks it becomes a personal “you OK?” check-in, and the digest flags them as worth a call.
TUE 7:00 PM	You + Ben get the digest: “ 5/7 submitted · Missing: Tanner (3 wks), Gianni ” + a link to the coach view.
ALWAYS	Form → data sheet → live dashboard, instantly. Every rate is computed from raw counts — never typed.

Reading the dashboard (60-second habit)

This Week's Check-Ins is your first look: green **Submitted** / red **Not yet** per mentee, worst streaks sorted first (“3 wks missing”), and a six-dot strip showing each rep's last six weeks — **2/6 wks** is a conversation, **6/6** is a shout-out.

Below it: leaderboard, standards heatmap, sales by channel, and a full per-rep view (Rep toggle, top right). The campaign selector keeps history forever — Spring = Campaign I, Summer = II, Fall = III — and rolls to the next campaign (and year) by itself. Week numbers restart at 1 each campaign without ever mixing data.

The only three things coaches ever do

REMOVE A REP	Data sheet → Roster tab → set their Active column to N . Texts, the form's name list, and the dashboard all update themselves. (Re-activate with Y — history comes back.)
ADD A REP	New Roster row (next r-number, name, Active Y) + phone & email in the private SNA Rep Contacts sheet. Everything reads it live — nothing to restart. No phone on file = they're simply skipped, never blocking.
CHECK IN	Open the dashboard any time — or wait for Tuesday's digest text. That's it.

House rules

- Texts send from Alan's Messages on the Mac — it must stay **on, awake, and signed in**.
- All data lives forever in the SNA Dashboard Data sheet; nothing is ever deleted at campaign turnover.
- Power check from the Mac's Terminal: `python3 ~/SharpNinja/sna_checkin.py status`
